

CEN4025C Module 6 Project

The repo for this project duplicates the starter code from Module 5. Complete the following steps:

1. Copy your Module 5 solution code to this repository
2. Modify the folder structure and configuration files (create new files as necessary) as described in Ch. 16 of our textbook to combine the front end project into the back end project.
3. Provide a screen snip of your modified folder structure.
4. Run the following commands and provide screen snips of your results:

```
mvn clean  
mvn package
```

Submit your project to the GH Classroom repo, include your screen snips from the above steps.
